

The LevelUp AI Builder Cohort — Landing Page Content

Complete copy of the LevelUp AI Builder Cohort landing page (the AI-Generalist build). Organized section by section — edit freely. Bracketed notes are placeholders to confirm before publishing.

1. Hero

Eyebrow: LIVE COHORT · AI GENERALIST PROGRAM

Headline: Transform your career by becoming an AI Generalist.

Subhead: Live online cohort. Learn from top mentors, build practical AI skills, and ship real work. Become the person who can use AI across content, operations, and product.

Buttons: Request Invite

2. Why now

Eyebrow: WHY NOW

Headline: Everyone can use AI. Only the people who build with it get results.

Using AI means chatting with it. Building with it means turning it into a product, a system, or an automation, something that runs on its own and produces results, for your customers or your team.

Stats

- **88% → 6%** — Companies use AI, but only 6% see real bottom-line impact (*McKinsey, 2025*)

- **95%** — Of company AI pilots deliver no measurable return (*MIT, 2025*)
- **+56%** — More pay for people with AI skills (*PwC, 2025*)

The leverage ladder (a loud, crowded base; a tiny few on top — narrower = rarer):

- **Build & ship** — under 20M · real impact ← the few who build / **you, after this cohort**
- **Automate with it** — ~few M · getting rare
- **Pay for it** — ~50M · still just using
- **Just chat with it** — ~1.3B · the loud, crowded base

Sources: ~16% of the world uses AI (Microsoft, 2025); ~50M pay (OpenAI, 2026); under 20M build, via GitHub Copilot's user base (2025).

Everyone uses AI. Most even pay for it. But the people who build with it — who turn it into an automation, a system, a product — are the only ones who move real results and real money. That is the step this cohort takes you to.

3. What you'll learn (the pillars)

Eyebrow: WHAT YOU'LL LEARN

Headline: AI isn't one skill. It's a stack, and you'll learn every layer.

Here is the whole map at a glance. First you learn to use AI properly. Then you learn to turn that into real products. You build it up one layer at a time.

1. **AI Fundamentals** — Get reliable, useful work out of any AI tool, and understand how it actually works. *You'll build: a prompt and research setup you reuse for everything.*
2. **Generative AI** — Make images, video, voice, and content with AI, at a professional level. *You'll build: a full content and brand kit.*
3. **Automation & Agents** — Connect your tools so the routine work runs without you, and build your first agents. *You'll build: live automations and a working agent.*
4. **Building Products** — Turn an idea into a working app on your own data, with no code needed. *You'll build: a real MVP of your own idea.*

5. **Shipping to Production** — Make it reliable and safe, then take it live for real users. *You'll build: a deployed product people actually use.*
-

5. Who this is for

Eyebrow: WHO THIS IS FOR

Headline: If you'd rather build than wait, you're in the right place.

Different starting points, same finish line. You walk out able to build.

- **The Founder or Business Owner → a 0-to-1 AI builder.** Before: every idea needs a developer, a budget, or another hire. After: builds the MVP, the tools, and the systems themselves.
 - **The Operator or Professional → the AI builder on their team.** Before: uses ChatGPT, but has never built anything with it. After: leads AI at work, and ships agents and tools that save real hours.
 - **The Marketer → an AI growth builder.** Before: making content by hand, one piece at a time. After: runs a content engine, with agents executing the campaigns.
 - **The Analyst or Generalist → an AI data builder.** Before: pulling reports and answering the same questions by hand. After: builds AI tools that analyse and answer on their own.
-

6. How it works — the 6-month roadmap

Eyebrow: HOW IT WORKS

Headline: 6 months. Something real built every single weekend.

No theory dumps, and nothing taught once and forgotten. Every month you unlock a new skill, build with it that weekend, and carry it into the next.

Journey: M1 Fundamentals & first builds → M2 Video, social & automation → M3 Agents & no-code apps → M4 Build your MVP → M5 Production → M6 Deploy & ship

Month 01 — Speak AI fluently.

- *Learn:* how AI really works, prompting that holds up at work, research, and image generation.
- *Build:* a reusable prompt system and a brand and image kit.
- *Why:* you get a real win in week one, before doubt sets in.

Month 02 — Create and automate.

- *Learn:* AI video and voice, a content engine, and automation with Make, Zapier and n8n.
- *Build:* an AI video, a content engine, and your first automations.
- *Why:* your first taste of work that runs without you.

Month 03 — First agent, first app.

- *Learn:* what an agent really is, how to make it reliable, and how to build apps with no code.
- *Build:* a working agent and a no-code app.
- *Why:* this is where you stop using AI and start building it.

Month 04 — Turn your idea into an MVP.

- *Learn:* scoping a product, building with AI coding tools, connecting your own data, and going to market.
- *Build:* a working MVP on real data, with your first users.
- *Why:* everything so far becomes one real thing that is yours.

Month 05 — Works on my screen, to production.

- *Learn:* multi-agent systems, scale, safety, and what app stores need.
- *Build:* a production-grade system with guardrails.
- *Why:* this is the depth the short programs skip.

Month 06 — Take it live.

- *Learn:* testing, deployment, monitoring, and a senior review of your build.
- *Build:* a deployed product with a live link, shown at Demo Day.
- *Why:* you finish with something real people can open and use.

7. What you'll be able to build

Eyebrow: WHAT YOU'LL BE ABLE TO BUILD

Headline: Pick any part of a business. You'll be able to build for it.

Most programs hand you a generic project. This one makes you able to build whatever your work actually needs. Every one of these is something you can build inside the cohort.

- **Customer Support** — a support chatbot trained on your own docs · a voice agent that answers calls · auto-triage and reply drafting
- **Marketing** — a content engine that runs your socials · ad creative and a full brand kit · a campaign agent that executes for you
- **Sales** — your own working CRM · a lead-generation and outreach agent · follow-ups that send themselves
- **Operations** — automations across your tools · internal tools and dashboards · an agent that handles the busywork
- **Product & Data** — your own AI app on your own data · an assistant that answers from your files · a product taken all the way live
- **Whatever you run** — the same skills, pointed at your problem · built with you by working mentors · yours to keep and ship

8. The tools

Eyebrow: THE TOOLS

Headline: The tools you'll actually use.

You won't just hear about these. You'll build with them until they're second nature.

- **Use & create:** ChatGPT, Claude, Gemini, Perplexity, Midjourney, Runway, ElevenLabs, Canva, Make, Zapier, n8n, Relevance AI, Lovable, Bubble, v0, Supabase
- **Build & ship:** Claude Code, Cursor, Codex, LangChain, LangGraph, Hugging Face, Pinecone, Vercel

9. Mentors

Eyebrow: WHO TEACHES YOU

Headline: You learn from people who build with AI for a living.

Not rotating strangers or anonymous TAs. The same mentors are with you all six months, and each one owns a part of the stack. They build this in the real world, then teach you to do the same.

- Mentor · TBA — owns **AI Fundamentals**
- Mentor · TBA — owns **Generative AI**
- Mentor · TBA — owns **Automation & Agents**
- Mentor · TBA — owns **Building Products**
- Mentor · TBA — owns **Shipping to Production**

[Placeholder: full mentor lineup announced at cohort kickoff. Add real names, builds, and the pillar each owns before publishing.]

10. How you'll learn

Eyebrow: HOW YOU'LL LEARN

Headline: Every week runs on the same simple loop.

1. **Learn** — live weekend sessions where mentors teach it and build it in front of you.
 2. **Build** — you build the same thing on your own project, not a throwaway exercise.
 3. **Apply** — you put it to work in your real job or business, and get feedback on it.
 4. **Grow** — you keep building with the community, for life.
-

11. Choose your depth

Eyebrow: CHOOSE YOUR DEPTH

Headline: Start with the full journey. Step off when it fits.

The cohort is one curriculum with three ways through it. Most people take the full six months, from zero to a product that is live. If you already build, you can start deeper. If you only need the foundation, take just that. Same room, same mentors. You choose how far you go.

- **Mastery — the full 6 months** (*most popular*): zero to a deployed product. What most people come for.
- **Foundations — the first 4 months:** the foundation and your first real MVP.
- **Pro — the back 3 months:** skip the basics, go straight to production and launch.

Not sure which is you? We help you pick inside your application, so you never pay for what you already know.

12. Why LevelUp

Eyebrow: WHY LEVELUP

Headline: Built by one of India's largest learning communities.

This is not a first-timer running a cohort off a slide deck. LevelUp has trained tens of thousands of people and built one of the largest creator and filmmaking communities in the country. This is that same machine, now pointed at the most valuable skill of the decade.

- **3 lakh+** in the community
- **49,000+** learners trained
- **821+** cities
- **40** capped per cohort

[Confirm these numbers are current before publishing.]

13. How to apply

Eyebrow: HOW TO APPLY

Headline: We take 40 builders per cohort. Here's how you get in.

The application is a filter, on purpose. It keeps the room full of people who will actually build.

1. **Request an invite** — fill the short application. We read every one.
 2. **Pay a refundable fee** — it filters out the casual. You get it back if we say no.
 3. **Sit for an interview** — a short call on fit, intent, and which depth suits you.
 4. **Get a decision** — yes or no within 24 to 48 hours.
 5. **Confirm your seat** — lock your place and your path for the cohort.
-

14. The investment

Eyebrow: THE INVESTMENT

Headline: Invest in becoming a builder. Not another course.

Price (Mastery · full 6 months): ₹1,25,000 — all in. No-cost EMI and flexible plans available.

What's included

- 6 months of live weekend classes, capped at 40
- Mentors who build with AI for a living
- 20+ real builds across every part of a business
- One product taken all the way live
- A portfolio that proves you can build
- Lifetime access to the builder community

Also available: Foundations or Pro at ₹75,000 each. Most people take the full journey.

Halfway guarantee: reach the halfway point and feel it isn't what we promised? We refund you. The price is right here — no sales call needed.

40 seats · next cohort dates shared when you apply.

15. FAQ

Eyebrow: QUESTIONS

Headline: The things people ask first.

I'm not technical. Can I really build?

Yes, that is exactly who this is for. The first four months use no-code and AI tools, no coding needed. You only touch real code in the deeper months, and even then we walk you in.

What if I only want the first half?

You can take just Foundations, the first four months, and walk out with a real MVP. Most people go the full six because that is where you ship something live. We help you choose when you apply.

Is this actually live, or recorded?

Live. Capped at 40, with mentors, on weekends. We do not sell recordings as live. Everything is recorded for catch-up, but the building happens together.

I run a business. Will this fit my schedule?

It is built for working people. Classes are on weekends, with optional weekday help if you get stuck. Plan for about 8 to 10 hours a week, including your own building.

Do I need an idea to start?

No. Some people arrive with one, some find it in the first month. Either way you build on something real to you.

Is the application fee really refundable?

Yes. It is there to filter out people who won't show up. If we don't take you, you get it back.

What do I actually walk away with?

Working AI builds across marketing, sales, support, operations and product, a portfolio that proves it, and one product you took all the way live, shown at Demo Day.

16. Final call to action

Eyebrow: 40 SEATS · LIVE FOR 6 MONTHS

Headline: Enough people just use AI. Become one who can build with it.

Subline: 40 seats. Live for 6 months. Request your invite.

Button: Request an Invite
